

TELL TAIL AEROSOL

DIRECTIONS FOR USE

Ensure animals are clean and dry before painting. Remove any loose hair.

Apply a strip of paint 15cm long by 5cm wide forward along the spine from the tail head.

Oestrus activity is indicated by the rubbing, or removal of the paint patch.

Tell Tail correctly applied will last approximately 30 days on cows that have not cycled, depending on conditions.

To use Tell Tail to its full potential, follow the FIL Mating Management System:

1. Paint all cows with **RED** paint three weeks after calving. If rubbed, this indicates when the cow has started to cycle again. If the cow has not come into heat after calving you can take remedial action.
2. Paint all cows with **GREEN** paint immediately prior to commencing your AI programme. Rubbed paint identifies the cows coming into heat on a daily basis.
3. Paint each cow with **BLUE** paint as soon as she has been AI'd. This will tell you if she has held to the service.
4. Paint all cows with **YELLOW** when pregnancy is confirmed.

Cows with **RED** paint have not cycled after calving

Cows with **GREEN** paint are waiting to be AI'd

Cows with **BLUE** paint are holding to AI service

Cows with **YELLOW** paint are confirmed pregnant
