

## DIRECTIONS FOR USE

### FIL Impact Red

#### MILKING MACHINES

1. After milking flush plant with at least 10 litres per cluster of clean cold water.
2. **HOT WASH:** Set thermostat to 85°C. Add contents of both sachets to wash programme for hot wash using the following quantities:
  - 1 x 112.5g sachet per 150 litres of water
  - 1 x 150.0g sachet per 200 litres of water
3. **JETTER UNITS:** 10 litres of water per set of clusters.
4. Once wash is complete open plant and drain residues.  
(Note GMP users should rinse with potable water only)  
Twice weekly (or more frequently if water quality or cleaning systems require it) use IMPACT BLUE sachets for a hot chlorinated alkali wash.

#### MILK SILO

1. Rinse with copious amounts of cold water to remove milk residues.
2. Apply hot water wash using IMPACT RED sachets in the same concentration used for the milking plant.
3. Open milk silo outlet valve and allow to drain.

The minimum quantity of hot water is 2% of the silo volume with a minimum volume for silos of 120 litres.

Hot water must be of a quality to meet NZFSA Standard D106, (Farm Dairy Water).
