

DIRECTIONS FOR USE

FIL Uddermark

Udder Mark is manufactured with a 360° valve for ease of application. Udder Mark is formulated to last on the udder for up to 8 days. However to ensure continued visibility it may need to be touched up periodically. Udder Mark's low irritancy formulation ensures there is no discomfort to the treated animal.

1. Shake can well before use.
2. Ensure udders are clean and dry before applying.
3. Hold can approximately 15cm from the udder ensuring tails is clear of area to be sprayed.
4. Apply Udder Mark RED to cows treated with antibiotics.
5. Over spray Udder Mark Green when the cows has reached the recommended withholding period and milk is clear to return to the silo.
