

DIRECTIONS FOR USE

FIL Farm Chlor Chlorinator Rods

It is dangerous to use this product in a manner inconsistent with its labelling. Keep and use Farm Chlor® in the supplied container in a cool, dry, well ventilated area with the lid tightly closed immediately after use. Never mix Farm Chlor® with other chemicals including other chlorine chemicals. This product is chemically reactive with many products and contamination of this product with any chemical or organic material may result in chemical reaction and fire. Temperatures above 52°C (125°F) may cause sufficient heat generation to ignite combustible materials. Farm Chlor® is designed for use with the Farm Chlor® Chlorinator system to deliver reliable chlorine dosing. After replenishing and closing the Farm Chlor® Chlorinator system, always rinse the system with fresh water to prevent damage. Wear protective clothing – gloves, eye, face protection. Use only with clean plastic scoop, do not eat drink or smoke whilst using this product. Wash hands after use.

STANDARD APPLICATION:

Product should be loaded into the sleeve of the Farm Chlor® Chlorinator. The dial must be set to provide a recommended level of 1-5ppm residual chlorine at the point of use. It is recommended to begin dosing at a low level to establish the point of use concentration – which will be determined with test strips supplied. Replenish as necessary. Refer to the Farm Chlor® Chlorinator Disinfection System instructions for further information. Each rod weighs 300g.
